

HireSense AI

ATS Analysis Report

Overall ATS Score: 77.0/100

Resume Skills

AWS, Artificial Intelligence, Data Analysis, Deep Learning, Excel, Express.js, FastAPI, Git, GitHub, Machine Learning, Matplotlib, MySQL, NLP, Node.js, NumPy, Pandas, PostgreSQL, Power BI, Python, React, SQL, SciPy, Scikit-learn, Seaborn, Statistics, Streamlit, Transformers, spaCy

Job Description Skills

AWS, Data Visualization, GCP, Git, Machine Learning, NumPy, Pandas, Python, SQL, Scikit-learn

Matched Skills

AWS, Git, Machine Learning, NumPy, Pandas, Python, SQL, Scikit-learn

Missing Skills

Data Visualization, GCP

AI Resume Feedback

Resume Strengths

- * **Strong Alignment with Job Description:** Excellent fit for core requirements like Python, SQL, Machine Learning, Pandas, NumPy, Scikit-learn, structured data, and data visualization tools.
- * **Relevant Project Experience:** The "Healthcare Analytics Dashboard" project directly addresses the job's focus on structured data for US healthcare clients and developing ML models for healthcare use cases. "HireSense AI" demonstrates robust ML model deployment, evaluation, and API integration.
- * **Generative AI & LLM Experience:** Demonstrated experience with Llama-3 (Groq) and Gemini API in projects like FinPath AI and HireSense AI, aligning with the preferred skill of working with LLMs.
- * **Cloud & Version Control:** Explicitly lists AWS and Git/GitHub, which are preferred skills.
- * **Model Evaluation & Deployment:** The HireSense AI project highlights practical experience in model deployment and evaluating ranking quality, addressing a preferred skill.
- * **Academic Background & Location:** B.Tech in Artificial Intelligence & Data Science is a direct fit, and the candidate is based in Hyderabad, matching the job location.

Resume Weaknesses

- * **Experience Section:** The "AI4IMPACT Hackathon Participant" entry is very brief and lists a future date (2026), which is likely an error given the expected graduation in 2027. This should either be corrected to the actual year or moved under "Projects" or "Achievements" with a clear date.
- * **Education Details:** Including High School and Intermediate education might be considered less

relevant for a graduate-level professional resume and takes up valuable space. Focus primarily on the highest degree.

* **Soft Skills Integration:** While listed, it's more impactful to integrate soft skills (e.g., Problem Solving, Communication) into project descriptions with concrete examples rather than just listing them.

Missing Skills

* **Data Visualization:** Although the resume includes tools like Power BI, Matplotlib, and Seaborn, the ATS may not have explicitly recognized "Data Visualization" as a core skill or desired a more prominent mention.

* **GCP:** The resume lists AWS but not Google Cloud Platform (GCP), which was mentioned as a preferred cloud platform.

Suggested Projects

* **Advanced Healthcare LLM Application:** Develop a project focusing on more complex LLM integration for healthcare, e.g., medical report summarization, clinical note analysis for specific conditions, or building a diagnostic assistant using fine-tuned LLMs.

* **Scalable ML Deployment on Cloud:** Create a project demonstrating an end-to-end ML pipeline deployed on a cloud platform (AWS or GCP), including data ingestion, model training, deployment with CI/CD, and monitoring. This would showcase deeper cloud platform expertise.

Certifications to Learn

* **Google Cloud Certified Associate Cloud Engineer:** To bridge the gap in GCP experience and showcase multi-cloud familiarity.

* **AWS Certified Solutions Architect – Associate:** To deepen expertise in AWS services relevant to data and machine learning.

* **DeepLearning.AI / Coursera Specializations:** Certifications in advanced topics like "Natural Language Processing Specialization" or "Generative AI with Large Language Models" can further enhance expertise in LLMs and AI.

Final Recommendation

This candidate is a **highly promising match** for the Data Scientist role in Hyderabad. The resume demonstrates strong foundational skills, directly relevant project experience in healthcare and LLMs, and a solid academic background. The few weaknesses are easily addressable. A minor refinement of the "Experience" section, ensuring explicit mention of "Data Visualization" as a skill, and potentially exploring GCP certifications would further strengthen the application. I recommend moving forward with this candidate.
